

Document Title: “Day 3 – API Integration Report – [E-Commerce]”

What to submit:

A report documenting:

- ❖ API integration process.
- ❖ Adjustments made to schemas.
- ❖ Migration steps and tools used.

Screenshots of:

- ❖ API calls.
- ❖ Data successfully displayed in the frontend.
- ❖ Populated Sanity CMS fields.
- ❖ Code snippets for API integration and migration scripts.

The screenshot shows the Sanity API console interface. At the top, the user 'nansar nabbas' is logged in, and the project 'ecommerce-store' is selected. A trial status indicates '20 days left in trial'. The main header shows the project name 'ecommerce-store' with a plan of 'Growth Trial', status of 'Active', and project ID 'uhpkxngo'. A navigation bar includes links for Getting started, Overview, Members, Studios, Datasets, Access, Activity, Usage, Plan, API (selected), and Settings. The 'API' section is active, displaying 'Webhooks' with options for CORS origins and Tokens. The main content area is titled 'GROQ-powered webhooks' and describes HTTP callbacks to a given URL triggered by changes in your content lake. It shows '0 of 2 webhooks (2 included in plan)' and provides a '+ Create webhook' button and a link to 'Learn more about webhooks'.
